

Digital solutions for your operations

José Antonio Montes

Technology designed for everyday work

At Cabimi, we develop digital tools tailored to each company's processes.

Your operation shapes the solution

We understand cargo and ecommerce operations. We turn operational needs into systems that help teams record information and track their work.

The experience behind Cabimi

José Antonio Montes

Creator and developer of WFS Platform V3

A platform bringing together tools for drivers, customers and administration, with modules for different cargo processes.

That development experience is the foundation of Cabimi and its approach to solutions tailored to each business.

Ecommerce
Flowers
Transfers
AOA
Empty

Returning empty PMCs

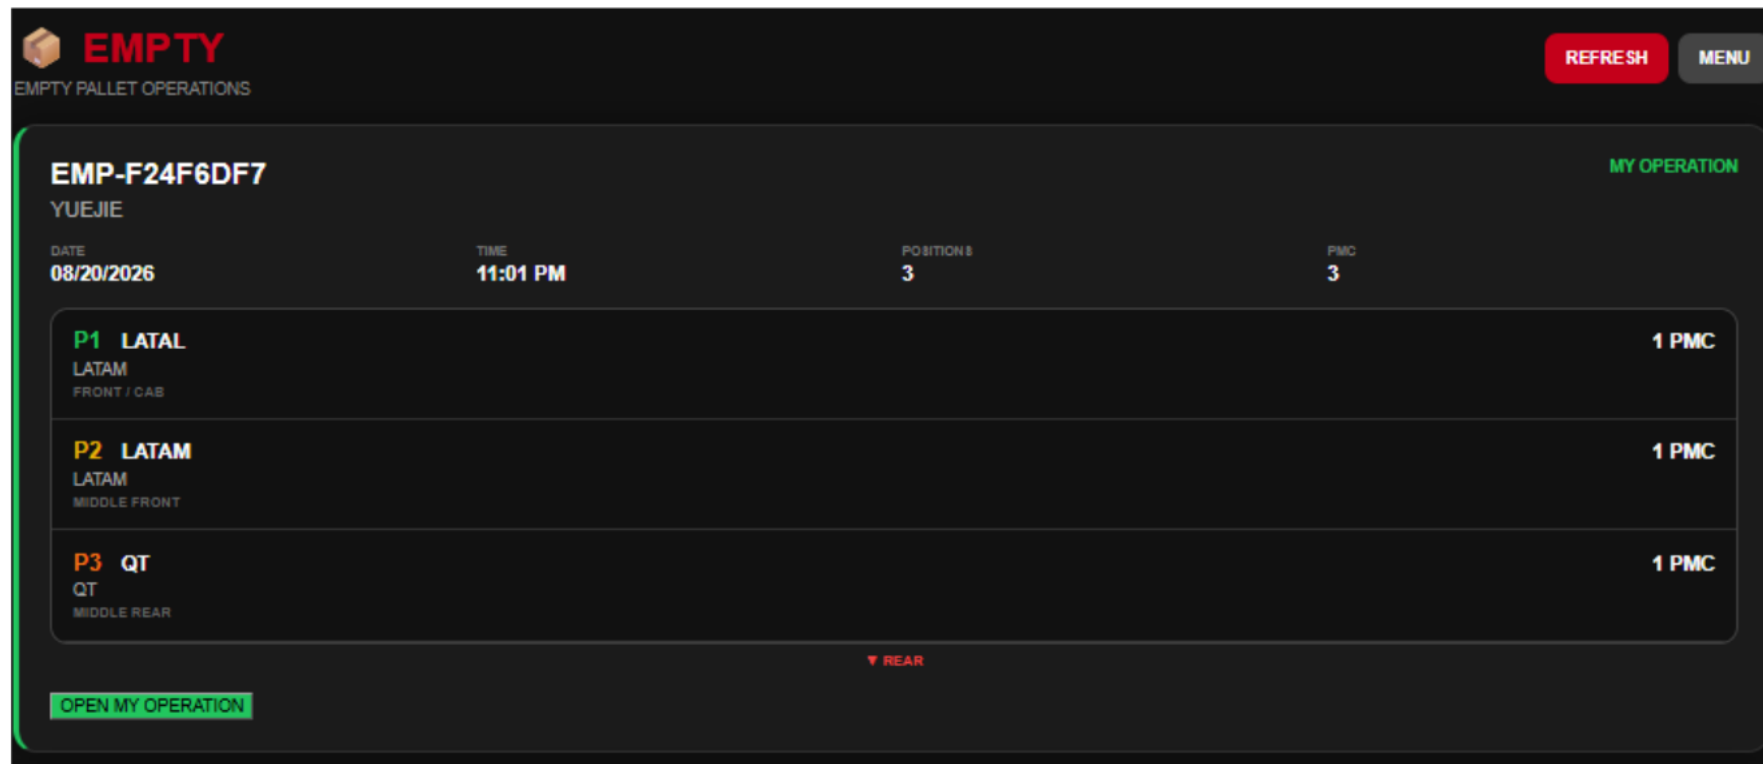

Breakdown is complete. Tracking continues.

After cargo breakdown, empty PMCs must return to the airline. When the process relies on paper, checking quantities, movements and deliveries requires searching through records.

Empty brings this operation into a digital workflow.

Empty: operational control

A view of empty PMCs, their airline and their position inside the trailer.

Screenshot of the module developed in WFS Platform V3

PMC tracking and delivery confirmation

PMC identification

View the recorded equipment numbers.

Trailer positions

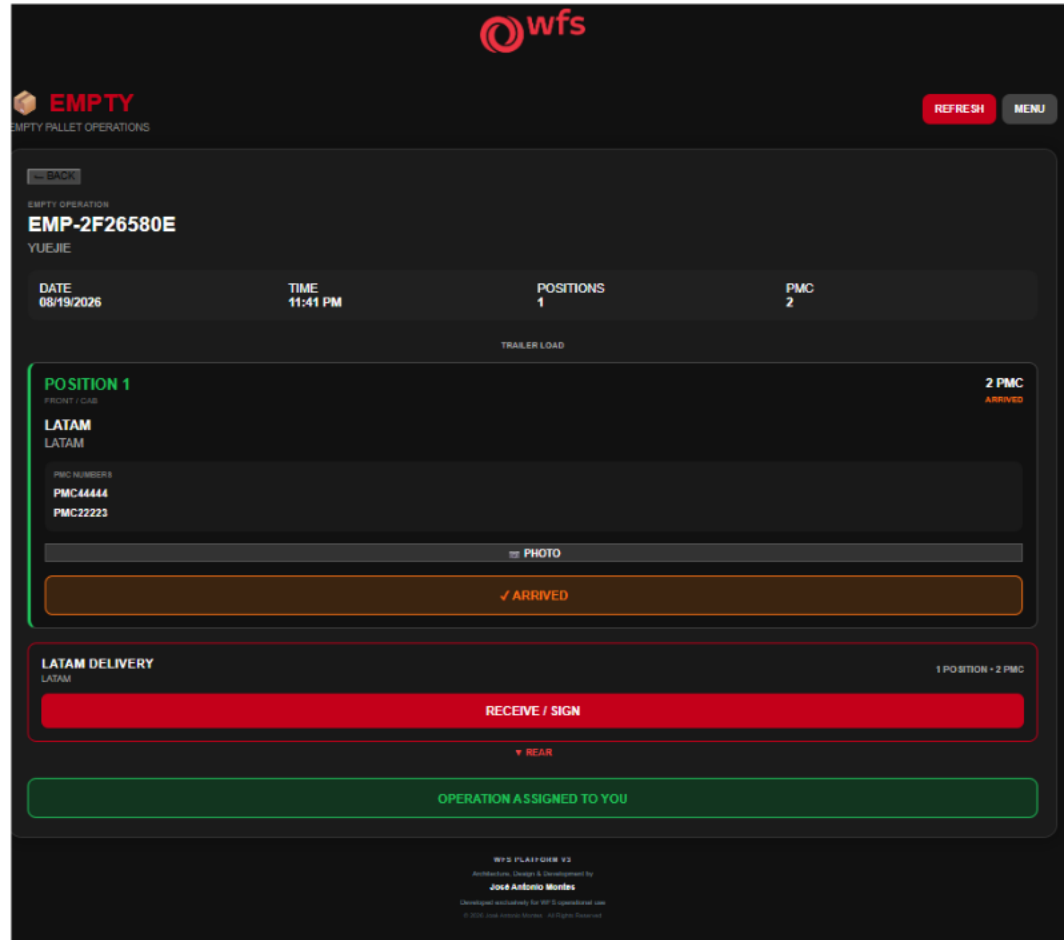

Organize PMCs by position inside the trailer.

Arrival status

Track equipment arrival.

Signed receipt

Confirm delivery through RECEIVE / SIGN, with evidence within the workflow.

Solutions tailored to your business

Empty is our first offering for cargo and ecommerce

Cabimi also develops custom tools. We learn your process, define your needs and agree on a solution with a clear scope.

Each project can incorporate your company's visual identity, with development credit to Cabimi.

Let's discuss your operation

We will show you Empty and review how it fits your empty PMC return process.

- 01** Module demonstration
- 02** Operational review
- 03** Implementation proposal
